"All In One" Communications Platform

Smarter is better. IPitomy is an "All In One" business communications platform. IPitomy is a complete business phone system including all of the traditional PBX system features that business has come to expect, plus messaging, music on hold, call queuing, web based administration console and much more.

Smart VoIP Features

Far from traditional, along with all the usual features, IPitomy includes a great new set of exciting features based upon VoIP technology. VoIP provides an open architecture to build upon for maximum flexibility and maximum value. IPitomy is a business phone system that is not limited by the boundaries of your office. Telephones for your business phone system can be located anywhere there are broadband connections. For instance, an extension can be at home for home bound employees. A traveling employee can have an extension that can be used from a hotel room or an Internet Café. Since these extensions use a broadband Internet connection, the calls cost nothing.

Simple to Use (Because It's Smart!)

Since IPitomy is based on the latest in VoIP technology, all of the features are in one easy to use system. This simplifies system administration. The system has an easy to understand web based administration console that makes changing system settings a snap. It is not necessary for anyone to have a technical background to be capable of making changes to the system.

Smarter VoIP Services

Included with your IPitomy system is a 30 day free trial of IPitomy's next generation broadband VoIP

service. This service provides local and long distance telecommunications services for a fraction of the price the phone company charges. Try it, if you like it, switch all of your phone lines to broadband. This will save money every month on your current phone bill. This service is available without the addition of any hardware and requires only a subscription. It's easy and it reduces expenses.

Always Get the Smartest

With IPitomy, you can subscribe to more than one service. Try that with your local phone monopoly. If one network is ever unavailable for any reason, you have the other network as a backup. This is a great option to provide business continuity during disasters.

Smart Operator Console

Go beyond the barriers of traditional telephone systems. With IPitomy, the receptionist gets a special view of the entire phone system. Gain the capability to see at a glance who is on the phone or if someone is away. Calls can be put on hold, put into queues, into a conference, or transferred to an extension or voice mail with the click of a mouse. SOC provides a better view of what the receptionist needs to be more efficient.

Smart Personal Console

Each user can have a console that allows them to make changes to their voice mail, extension, call forwarding and view call history. SPC allows a user to have more control over their extension and mailbox to get the most out of your telephone system.

Unified Messaging is Better

IPitomy has Unified Messaging. Your voice mail messages are recorded and sent to your email address. You can play your voice mail messages on your PC and decide to save, forward or delete the messages from your email inbox. You can still get them from your phone too!

Dial from Outlook or other Contact Management Systems

IPitomy allows you to click to dial from Outlook or any other TAPI compliant contact management system. To call someone from your contacts in Outlook, just click dial and the number is dialed.

Meet Me Conferences

Conference calls can be set up in two ways with IPitomy. Conferences can be set up from the telephone itself, and Meet Me Conference Rooms can be created. With Meet Me Conferencing, callers just call into the conference room to join the conference. Conferences can be password protected and can be set up fast for ad hoc conferencing.

One Provider for All of Your Advanced Voice and Data Requirements

Your IPitomy Dealer is one source for all of your voice and data needs. IPitomy dealers can provide all aspects of your new Smart communications products and services. All hardware is supported locally, all services are supported locally and your dealer is there to provide on site service and support whenever you need it! IPitomy dealers support what they sell and install.

More than Just a Phone System

IPitomy is an all in one business communications system that provides everything you need for enhanced business communications. Start working smarter by communicating smarter. Why purchase out dated technology when you can get IPitomy for the same price? IPitomy provides advanced features and saves money each and every month on your telephone company expenses.
